

Kwasica ketonowa spowodowana niedoborem transportera-1 monokarboksylanu

Kod Orpha: 438075 Kod OMIM: 616095

Opis choroby *

Definicja

A rare disorder of ketone body transport characterized by recurrent episodes of ketoacidosis provoked by fasting or infections in the first years of life. The episodes are typically preceded by poor feeding and vomiting and are associated with dehydration, in severe cases also with decreased consciousness and insufficient respiratory drive. Hypoglycemia is observed only infrequently. Patients with homozygous mutations tend to present at a younger age, have more profound ketoacidosis, and may show mild to moderate developmental delay in addition.
