

Agenezja wrodzona moszny

Kod Orpha: 495879 Kod OMIM:

Opis choroby *

Definicja

A rare urogenital tract malformation characterized by the complete absence of the scrotal rugae in the perineum between the penis and anus, with bilateral testes being present in a cryptorchid or ectopic position. Hemiscrotal agenesis refers to the unilateral absence of scrotal skin with an intact midline raphe and ipsilateral cryptorchidism. Both malformations may be isolated findings, or occur in association with other anomalies.
