

Opis choroby *

Definicja

Uveal melanoma is a rare tumor of the eye, arising from the choroid in 90% of cases and from the iris and ciliary body in the other 10% of cases, which clinically presents with visual symptoms (including blurred vision, photopsia, floaters, and visual field reduction), a visible mass and pain. Fatal metastatic disease is seen in about half of all patients, with the liver being the most frequent site of metastasis.
