Opis choroby *

Definicja

Secondary intestinal lymphangiectasia is an acquired form of intestinal lymphangiectasia (see this term) manifesting as a protein-losing enteropathy due to another disorder such as Crohn's disease, congestive heart failure, sarcoidosis, Turner syndrome (see these terms) and often in patients who have undergone a Fontan operation. It is characterized by malabsorption, diarrhea, edema due to hypoproteinemia, steatorrhea and serosal effusions.
