

## Opis choroby \*

### Definicja

Mycoplasma encephalitis is a rare infectious encephalitis characterized by an acute onset of neurological signs and symptoms (e.g. altered consciousness, seizures, headaches, meningeal signs, behavioral changes) due to bacterial infection by *Mycoplasma pneumoniae*. Patients typically present unspecific signs and symptoms, such as fever, nausea, vomiting, fatigue, prior to onset of neurological manifestations and frequently have a history of a respiratory tract infection (e.g. pneumonia, bronchiolitis, pharyngitis).
