

## Opis choroby \*

### Definicja

Benign childhood occipital epilepsy, Gastaut type is a rare, genetic neurological disorder characterized by childhood to mid-adolescence onset of frequent, brief, diurnal simple partial seizures which usually begin with visual hallucinations (e.g. phosphenes) and/or ictal blindness and may associate non visual seizures (such as deviation of the eyes, oculoclonic seizures), forced eyelid closure and blinking and sensory hallucinations. Post-ictal headache is common while impairment of consciousness is rare.
